
PERSONAL INFORMATION

Degree	Masters in Geology
Date of Birth	November 17, 1986
Nationality	Australia and UK
Address	65/36 Vernon Terrace, Teneriffe, 4005, QLD AUSTRALIA
Phone	+61 421 776 104
Email	fernienicholas@gmail.com

SUMMARY

I graduated from the University of Adelaide in 2019 with a Masters in Philosophy specializing in heavy mineral geology, thermochronology, sediment provenance methods, field geology and structural geology. I was given the opportunity to work for Santos prior to my studies concluding in 2019. I have demonstrated a very strong work ethic and excellent time management skills, enabling me to maintain an effective balance over the 6 years of full-time study and almost 8 years with Santos. I thrive in team environments and have strong communication and leadership skills through in-house development and previous job experience. Recently, I have pushed myself into getting familiar with AI, particularly regarding development of niche fit for purpose tools, apps and websites to assist with various tasks.

PERSONAL ATTRIBUTES

- Demonstrated leadership and focus on safety and taking care of the environment
- Well-developed communications skills
- Software proficiency in GIS tools, Petrel, Petrosys and Office tools
- Dual-lingual (English and intermediate Spanish)
- Travel flexible.
- Capable and fast learner with diverse viewpoints

EDUCATION

Masters in Philosophy: Geoscience

Thesis Submission: *Thermal History of Central Australia: Cooper Basin, South Australia & Anmatjira Ranges, Northern Territory: Insights from Apatite Fission Track & U-Pb Thermochronology.*

Bachelor of Geophysics and Applied Geology with First Class Honours

Honours GPA: 7.00

Hons Thesis: A Low Temperature Thermochronology study of the evolution of the Ghanese margin in context with Equatorial rifting during the Cretaceous.

University of Adelaide, South Australia

Undergraduate GPA: 5.98

Courses: Sedimentary Geology, Tectonics and Structural Geology, Geophysics, ArcGIS Mapping, Remote Sensing, Field Geoscience, Igneous and Metamorphic Geology 2 & 3, Introduction to Geology, Physics, Statistics, Mineral & Energy Resources, Remote Sensing and Earth Systems History.

Exxon Mobil Field Trip: In April 2018 I attended a four-day field trip as a part of the Exxon Mobil graduate recruitment process. During this trip I attended lectures with associated table-top exercises and visited several field localities around the Cape Liptrap area in South-Eastern Victoria.

INDUSTRY EMPLOYMENT HISTORY

Santos SA

January 2019 – Current: Beginning at Santos as a graduate geologist, I have had opportunities to explore different aspects of the subsurface business. With this, I've had a large amount of exposure to operations geology and geomechanics as part of the Subsurface Ops group. Routinely participating in field geology, well planning and horizontal drilling. I joined the Cooper/NT group in 2021. Beginning with the Cooper Central (CC) Tight Gas team, I both participated in and led projects resulting in large-scale well-appraisal and development campaigns in Moomba. The primary focus as non-lead geologist on CC projects included identifying and defining 'conventional' type secondary targets to support the primary tight gas objective. As project lead, the team delivered a 22 well tight gas appraisal campaign. Since 2023 to now, I have been part of the Cooper Oil team. With the oil team my exposure to oil type horizontal wells grew quickly, geosteering 7 wells in four fields, targeting both shallow marine and onshore fluvial reservoirs. Delivery of horizontal well projects requires a detail driven approach with strong geology driven static model builds. Key to the process is honoring reservoir architecture through interpretations of core scale information up to modern analogue recognition.

Santos, SA

November 2016 – March 2017: I completed the Santos vacation program in Adelaide. My project required me to use analytical techniques to define the thermal history of the newly drilled Tanumbirini-1 well located in the central McArthur Basin, NT. This required the collation of previously conceptualized 2D basin models, available organic matter reflectance data and the incorporation of heavy mineral dating techniques facilitated by the University of Adelaide.

Horizon Oil, NSW

November 2015 – February 2016: I completed a summer vacation program with Horizon Oil in Sydney, working with the subsurface team. My primary role involved the collation and interpretation of data associated with oil and gas fields located in the South China Sea. This gave me the opportunity to understand the application of several key techniques, including wireline logs, seismic interpretation, core analysis, PVT data, structural mapping and reservoir data.

ADDITIONAL EDUCATION & TRAINING

2025 & 2026	Self-learning various AI tools, focused on the Cursor IDE
2019 to 2026	Various Soft skills and LEAP training
2025	Seismic Geomorphology and Seismic Stratigraphy
2025	Fluvial Systems - First Principles to Development
2025	Reservoir Model Design Training
2024	Geostatistical Modelling for Reservoir Characterisation
2023	Sedimentology & Stratigraphy for Field Development Workshop
2022	Geostatistical modelling & Reservoir Characterization
2022	Development Planning for Mature Fields
2021	Non-marine Reservoirs & Sequence Stratigraphy
2020	Practical Petroleum systems Analysis
2019	Prospect maturation and risk
2017	MPhil Geology
2016	HSC Majoring in Geology
2015	BSc Majoring in Applied Geology and Geophysics

PROFESSIONAL MEMBERSHIPS

From 2015	PESA and Geological Society of Australia
